

Art. No. 103257 tempusFLAT KLETT DS

Ready-to-lay self-adhesive 2 mm thick perforated synthetic fibre top layer without installation grid for the construction of a type A panel heating system as a composite construction. The synthetic fibre top layer is used to accommodate herotec hook-and-loop fastener tubes with a thickness of 10 to 16 mm. The lowest installation height is 15 mm.

The adhesive on the reverse side allows fixation on flat surfaces without any further aids. This can be done on almost any substrate such as existing screed, ceramic floor coverings, wooden floors or flat and smooth concrete surfaces. The substrates must comply with DIN 18202 and be primed in accordance with the requirements of construction chemicals. Composite constructions require professional planning and processing! In addition to the installation instructions from herotec, the manufacturer's specifications for the selected load distribution layer must be explicitly observed.

Material	Synthetic fibre
Colour	grey
Panel dimensions	1000 x 500 x 2 mm
Bonding	self-adhesive with release film
Foil overlap / type of laying	end to end
Construction type	composite construction type
Packaging	40 units per box/ 20 m ²
